Dear customer,

More than 45 years ago, in 1969, the success story of TVH began. Mr Paul Vanhalst and Mr Paul Thermote, neighbours and school friends, joined forces and started with the purchase and repair of agricultural machines and used lift trucks.

Increasing industrialisation led to a growing need for lift trucks and lift truck parts. Slowly but surely, TVH was growing into a global player, thanks to the success of the product and customer service, but also thanks to acquisitions. TVH turned into an all-round supplier, a real one-stop shop, by adding hand pallet trucks, hand trolleys, lifting cranes ... to its range and by setting up a domestic rental division.

TVH Group is organized in 2 important activities: Parts & Accessories and Rental & Equipment. This last activity has 3 divisions, namely Equipment Division (sales of second-hand lift trucks and aerial work platforms), Rental Division (short- and long-term renting of lift trucks and aerial work platforms) and Service & Repair Division. The Rental Division is active in Belgium, the Netherlands, Luxemburg, Czech Republic, Germany, Poland, Slovakia, Hungary, Romania and Serbia. The Service & Repair Division is a service we only offer in Belgium. The Parts & Accessories and the Equipment Division are active in more than 170 countries worldwide.

After all these years, the business is still in family hands and has grown from 2 founders, to a workforce of almost 4000 employees worldwide, in 5 continents. The day-to-day management has now been handed over to the second generation.

## BACKSCAN® REAR DETECTION SYSTEM

### Backscan® Rear detection system

#### REF 111TP800

Backscan® is an invaluable driver aid to safety but it does not remove the driver's responsibility to ensure normal safety procedures when reversing.

#### Features:

- Reverse with enhanced safety and convenience
- Faster, easier and safer manoeuvring
- Prevents accidental damage
- Sleek design, compact size, latest technology
- Super-wide detection angle
- Easy and quick fitting

#### General:

Backscan® is an ultrasonic rear obstacle detection system, which utilizes the ultrasonic echo principle – transit time method – to help drivers reverse more safely. It is equipped with two pairs of sensors which emit a steady intermittent ultrasonic signal. The sensors both operate as transmitters and receivers, emitting and receiving reflected ultrasonic signals from possible obstacles. The distance from the obstacle is evaluated through the transit time of the evaluated signals and is indicated by a sequence of pulse tones from the warning buzzer. The closer the obstacle, the faster the warning pulse tones until these become constant at 0,45 m.

#### Technical specifications:

- Dynamic Scanning Memory
- Up to 2,5 m detection range
- 3-stage distance audio warning
- 4-row coloured LED + digital readout visual distance warning
- Fully waterproof control box (IP68)
- Fully waterproof sensors (IP68)
- Operating temperature: buzzer & display -20 °C to 60 °C
- Operating temperature: ECU & sensors -20 °C to 80 °C
- CE and EMC-approved
- RoHS compliant
- 12–24 V DC
- Self diagnostic function
- Interchangeable sensors

## BATTERY GUARD

***No more engine trouble due to the battery being run down!***

REF 111TP811 – 12 V

REF 111TP812 – 24 V

Battery guard (similar to battery brain, but independent to it) constantly monitors one or more single devices installed on your car, forklift or aerial work platform which may cause the anomalous battery draining when the engine is not running. While battery brain protects the whole electric plant of the vehicle, battery guard concerns only one or more additional devices. These devices must have a continuous working current not exceeding 45 Amps.

Battery guard disconnects the concerning device if the energy level of the battery drops below a preset level (typically 11,85 V or 23,4 V, depending on the battery). That allows the driver to start and run the engine normally.

As soon as the battery reaches the standard level (12,6 V or 25,2 V) thanks to the alternator feeding, battery guard automatically switches on the electric circuit and the device will run again.

No manual operation is required to restart the system.

Simply look at the green LED: light on: running, light off: device disconnected.

## HYDRAULIC OIL

**REF 111TP5058** – VG22

**REF 111TP5059** – VG10

Specially developed for use in various hydraulic systems. This oil reduces pump wear to a minimum, which results in an extra long life span. Extremely suitable for the lubrication of vacuum pumps, textile machines and medium-duty gear transmissions. Has a good cleansing capacity and is extremely stable under thermal and oxidative load.

Offers a good protection against wear, corrosion (copper and steel) and the formation of rust. Furthermore the balanced additive offers a good protection against foaming and ageing, and provides the oil with good water-repellent characteristics. Any presence of small amounts of water will hardly influence the good filtration qualities
