- High strength
- High contactability

SOLVENT-BASED ADHESIVE – SPRAY

REF 143TA3526

- Bonding properties contact adhesive spray
- Fixture time: ca. 41 min
- 400 ml

Terokal 2444:

- High initial strength (allow 10 min for solvent evaporation)
- Contact- and pressure-sensitive spray
- Particularly suitable for bonding porous materials

Applications:

To bond fabric, polyester and polyester foams, leather, cardboard and coverings

STRUCTURAL BONDING – POLYURETHANE

REF [143TA3535](#)

- Service temperature range (short exposure): -40 to 90°C (120°C)
- Viscosity: pasty
- Open time at 23°C: 25 min
- Initial strength: 6 h
- Curing time: 5–7 d
- Tensile shear strength: >5 at 5 mm layer
- 310 ml

Terostat 8596 is a one-component, moisture curing direct glazing sealant with excellent sag resistance based on polyurethane, which cures by reaction with moisture to a soft elastic product. The skin formation and curing times are dependent on humidity, temperature and joint depth. By increasing temperature and moisture these times can be reduced.

The direct glazing sealant demonstrates the following characteristics:

- Excellent adhesion with primer 8519P on glass, ceramic coated glass and on painted surfaces
- Excellent adhesion on material residues
- High cure rate
- High UV resistance in connection with primer 8519P
- High shear strength, retained on ageing

Bonding areas: bonding of front, rear and side screens to the body of passenger cars, trucks, busses, forklift and tractor cabins as well as special vehicles.

STRUCTURAL BONDING – POLYURETHANE

REF 143TA3541

- Service temperature range (short exposure): -40 to 90°C (120°C)
- Viscosity: pasty
- Open time at 23°C: 20 min
- Initial strength: 1 h/4 h
- Curing time: 5–7 d
- Tensile shear strength: > 5 at 5 mm layer
- 310 ml

Terostat 8597 HMLC is a one-component, extremely sag-resistant direct glazing adhesive/sealant based on polyurethane, which crosslinks (cures) to a rubber-elastic material under the influence of atmospheric moisture. The skin formation time and the curing time depend on the moisture of the air and the temperature; in addition, the curing time depends on the depth of the joint. An increase in temperature and atmospheric humidity can accelerate skin formation and curing, whereas a lower content of atmospheric humidity and lower temperatures delay the reaction.

The direct glazing sealant is outstanding for the following properties:

- Very good sag resistance
- High elasticity and shear modulus
- Excellent adhesion to glass, glass with a ceramic coating and to painted surfaces, in connection with primer Terostat 8519P
- Good adhesion to the remaining material
- High curing rate
- High UV resistance in connection with primer Terostat 8519P
- High tensile shear strength, even after ageing
- Very low electrical conductivity

Application areas:

Bonding of front, rear and side windows into the body of motor vehicles (cars, trucks, busses, driver cabins of tractors/fork lift trucks and special-purpose vehicles). Bonding of side windows made of single-pane glass or insulating glass in bus and rail coach manufacture.

Furthermore, Terostat 8597 HMLC is suitable for all applications which require very high electrical insulation of the adhesive used for the bonding of windows (for example an adhesive compatible with aerials).
